

Ensuring your content is delivered, your platforms are controlled, and every screen performs as intended

Digital signage is a powerful communications channel, but managing displays, players, content platforms, and service workflows across a distributed estate can create significant challenges. Our Digital Signage Managed Services provide the support, monitoring, and operational management needed to keep your signage environment reliable, visible, and under control.

We bring together responsive support, VIP Ops monitoring, content platform administration, device management, reporting, governance, and continual

improvement within a single managed service. This structured approach helps reduce disruption, maintain content continuity, and provide greater confidence in the performance of your digital signage estate.

From workplace communications and visitor information to wayfinding, kiosks, and brand messaging, we provide end-to-end operational oversight across the signage lifecycle. The result is a more resilient, scalable, and accountable service that enables consistent experiences across every location.

The Service

Proactive monitoring through VIP Ops

Performance reporting and insights

Content platform administration

Service governance

Content scheduling support

Asset and configuration management

Device and endpoint management

Lifecycle management

Incident and problem management

Continual improvement

Benefits

Maintain consistent content delivery across every location

Reduce operational burden on your IT, facilities, and communications teams

Improve performance with proactive maintenance and lifecycle management

Improve visibility into device health, platform performance, and estate trends

Enable better planning through reporting, analytics, and operational insight

Simplify content platform and device administration

Deliver impactful, reliable, and well-managed signage experiences at scale

Why Kinly Digital Signage Managed Services?

Designed for Long-term Performance

By building around supportability, scalability, and lifecycle management, we sustain performance across your signage estate.

Governed by Design

Structured governance, standardized processes, and validated technologies ensure consistency and control.

Built to Continually Improve

Service reviews, operational reporting, and performance insights help identify opportunities for ongoing optimization.

Operationally Ready

Integrated support, monitoring, platform administration, and preventative maintenance ensure your services always run smoothly.

End-to-end Lifecycle Ownership

From support and monitoring to governance, reporting, and optimization, we provide accountability across your entire signage estate.

Consistent Experiences at Scale

Centralized oversight, repeatable processes, and global best practices enable consistent delivery across every screen, location, and region.
