

Is your business prepared for the return of employees to the office?

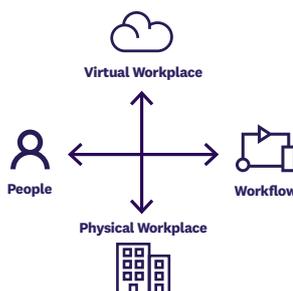

Companies are envisioning a ‘new normal’, prioritising additional space and flexibility with an increase in employees working from home on a semi-regular basis.

“A survey by Gartner found that 41% of employees are more likely to work remotely at least some of the time post-pandemic.” (CNBC)

The way we are working, collaborating and communicating with our key partners, suppliers and clients has changed overnight. During these unprecedented times video conferencing technology has enabled people to remain connected working from anywhere, and importantly on any device.

With video now the new normal is your workplace ready and enabled for your teams to return?

The majority of offices and meeting spaces are not currently designed to support social distancing, meaning for the foreseeable future we will need to work in a different way and adapt our workflows and meeting practices to connect our teams in both physical meeting spaces and those at home working in the virtual workplace.

With offices empty or less occupied this is an ideal time to build, plan and deliver the strategy for return to work.

Some of our key services include:

- Return to work health checks for existing equipment, meeting rooms, networks and collaboration tools.
- Space optimisation planning & solutions
- Booking & scheduling – monitoring staff access, numbers and meeting spaces.
- Remote management of office technology & traffic – monitoring the number of people in meeting rooms for safety compliance.
- Meeting room & technology redesign – do you need more smaller breakout rooms?
- Bringing WFH & BYOD/BYOM multi-collaboration platforms & tools to the office securely and efficiently.

Managing multiple collaboration tools in the workplace

Most companies have more than one collaboration app because end users deployed their own. While an organization may standardize on one collaboration platform, users will still choose others - a trend we predict will have been further fuelled by COVID-19 - where users will have made their own choices to implement tools to keep teams/departments/regions connected.

“A common deployment scenario now is organizations have a core corporate application, such as Microsoft Teams or Webex Teams, and complement it with another deployment” according to Nemertes Research analyst Irwin Lazar. (TechTarget)

Focus on ease of use, in a world of technology that can be confusing for a lot of people

Despite the mass adoption of collaboration technology due to the coronavirus outbreak we also recognise that this technology can still be confusing for a lot of people. To work efficiently we need predictable, secure and dependable ways to meet together, we need our physical and virtual workspaces to be in tune, together as one.

For us it does not stop with technology. We will be there every step of the way to help you work smarter, in different places and spaces.

How can Kinly help?

Kinly Trusted Advisor Consultancy

We have developed a methodology based on best practices, starting with people and process before technology. We combine this with our knowledge of human behaviour in collaboration environments, to make sure the technology also will fit the rooms and settings in which they are to be used.

Kinly Smart Monitoring

Managing complex collaboration environments requires expertise and experience. Our [Kinly Smart Monitoring](#) service will give you valuable insight into your collaboration estate and use patterns.

Kinly RTW Preventative Maintenance Support

Designed to provide reassurance that critical meeting spaces are functioning correctly before staff return to work (RTW). Kinly engineers will perform remedial works remotely to address deficiencies where possible, and a detailed report output will be provided of room health and further recommendations where applicable.

Kinly Interoperability Solutions

[Personal CloudRooms](#) allow users to host meetings, share content and collaborate with multiple participants across different platforms and endpoints/devices.

Kinly Room Design Simplicity

Kinly has developed a range of [standardized room solutions](#) for **Cisco and Microsoft** backed by an extensive program of services for scalable rollouts and smooth operations.

Kinly Events

With [Kinly Event Services](#) companies can host virtual online Town Hall meetings, or multi-day training events and more. Can be self-hosted or supported by a dedicated team of global concierge operators.
